PROFESSIONAL SUMMARY

Python Developer with over 2.5 years of commercial experience. I design and develop backend services using FastAPI, Litestar, and Django, including REST APIs, asynchronous workflows, and integrations. I work with PostgreSQL, Redis, ClickHouse, Kafka, and RabbitMQ; optimize queries, cover critical logic with tests, and maintain services in production. I have experience with high-load components handling 500+ RPS, AI/LLM pipelines, and selected full-stack tasks using React and TypeScript.

CORE SKILLS

Backend: Python, FastAPI, Litestar, Django, Django REST Framework, Django Ninja, Flask, asyncio, Pydantic, REST API, OpenAPI, OOP, SOLID

Data: SQL, PostgreSQL, MySQL, ClickHouse, Redis, NoSQL, MongoDB, SQLAlchemy, Django ORM, Alembic, pandas, NumPy, pgvector, S3

Integrations: Kafka, RabbitMQ, Celery, TaskIQ, FastStream, aiohttp, Webhooks, LangChain, RAG, LLM API

Infrastructure: Docker, Kubernetes, Linux, Git, GitHub, CI/CD, Pytest, Nginx, observability

Additional: JavaScript, TypeScript, React

PROFESSIONAL EXPERIENCE

Python Backend Developer

BASHNYA LLC | 02.2024 - 07.2024

- Developed and maintained Python backend services using FastAPI and Django.
- Implemented REST APIs, user request processing, and integrations with external services.
- Worked with PostgreSQL, Django ORM, and SQLAlchemy, including data models, queries, and migrations.
- Developed Telegram bots and scripts to automate internal processes and notifications.
- Fixed defects, wrote tests using Pytest, and worked with Git, Docker, and CI/CD.

Stack: Python, FastAPI, Django, REST API, SQL, PostgreSQL, Django ORM, SQLAlchemy, Telegram Bot API, Docker, Pytest, Git, CI/CD

Python Backend Developer

lets scale | 08.2024 - 10.2025

- Developed a FastAPI REST API for a service that generates scientific articles from experimental data; used asyncio for asynchronous request processing.
- Implemented data cleaning and normalization with pandas and NumPy, enabling reliable processing of more than 500 files per day.
- Designed an AI pipeline using LangChain and Ray, Pydantic data models, and a SQLAlchemy data-access layer; configured artifact storage in S3.
- Introduced Redis caching for LLM requests and intermediate results, reducing provider load and accelerating reruns of individual stages.
- Developed a Django administration module and a Flask webhook receiver; configured CI/CD for backend testing and deployment.

Stack: Python, FastAPI, asyncio, Pydantic, SQLAlchemy, LangChain, Ray, S3, Redis, Django, Flask, MySQL, pandas, NumPy, CI/CD

Python Backend Developer (Middle)

KTS Studio | 10.2025 - Present

- Develop and maintain backend services for several commercial products; design REST APIs and business logic using Litestar, FastAPI, and Django.
- For Flatica, implemented high-load modules for users, projects, subscriptions, moderation, and image processing; individual components handle 500+ RPS. Applied DDD, a Use Case layer, dependency injection, Domain Events, and CQRS.
- For X5 Retail Group, contributed to a centralized store monitoring system that aggregates internal metrics and video surveillance data, with analytical scenarios built on Django, FastAPI, Litestar, and ClickHouse.
- For ZECAR, developed Wildberries and Ozon integrations, a Django and Django Ninja backend, Celery and RabbitMQ background jobs, and PostgreSQL/pgvector storage; also completed selected JavaScript, TypeScript, and React tasks.
- Developed the "Russia - Land of Opportunity" LMS platform, including course completion, progress tracking, and feedback collection.
- Optimized SQL queries and PostgreSQL/ClickHouse structures, accelerating selected queries by 2-3x; wrote unit and integration tests, performed code reviews, and investigated production incidents.

Stack: Python, Litestar, FastAPI, Django, Django Ninja, SQLAlchemy, PostgreSQL, ClickHouse, Redis, Kafka, RabbitMQ, Celery, TaskIQ, S3, Docker, Pytest, React, TypeScript

SELECTED PROJECTS

RSD - PWA seller portal for a network of 150+ locations: JWT authentication, knowledge base, courses, tests, ratings, and analytics. Designed the backend using FastAPI, SQLAlchemy, and PostgreSQL, as well as selected frontend modules using React and TypeScript.

Barista KPI - PWA for a coffee shop chain: KPIs, motivation, gamification, checklists, knowledge base, and analytics. Contributed to backend design, migration from a Telegram Mini App to a PWA, and the development of a microservice architecture. Stack: FastAPI, SQLAlchemy, TaskIQ, PostgreSQL, Redis, Docker, Pytest.

Bowsell Project and Monitoring - public examples of backend development and monitoring. Repositories: github.com/krionefishy/Bowsell_project_public and github.com/krionefishy/monitoring

EDUCATION

Bauman Moscow State Technical University | 2024 - 2028

Software Engineering, Department IU7

LANGUAGES

Russian: Native | English: B2 (Upper-Intermediate)
